

Job Creation Estimates for Michigan Through Inflation Reduction Act

Modeling State-Level Impacts of Climate,
Energy, and Environmental Provisions of Bill

Sources for State-Level Budget Figures and Methodology for Inflation Reduction Act Job Creation Estimates

SOURCES FOR STATE-LEVEL BUDGET FIGURES

The expenditures modeled in this analysis include all of the climate, energy, and environmental justice programs in the Inflation Reduction Act (IRA) of 2022. This amounts to more than 100 total programs, each with a distinct section number in the legislation. Dollar figures for the tax credits come from the Congressional Budget Office and the Joint Committee on Taxation. All other dollar figures come from the legislation itself.

Specific references include the following:

Tax credit scores from the Congressional Budget Office and the Joint Committee on Taxation: https://www.cbo.gov/system/files/2022-08/hr5376_IR_Act_8-3-22.pdf

Text of the Inflation Reduction Act of 2022: https://www.democrats.senate.gov/imo/media/doc/inflation_reduction_act_of_2022.pdf

Spreadsheet tabulation of the IRA programs modeled in this analysis: <https://docs.google.com/spreadsheets/d/1iHbr4Ph3cD7r30Z093pWUMV2P1kLhywAeW2UilVp09U/edit#gid=0>

METHODOLGY FOR EMPLOYMENT ESTIMATES

We estimated state-level budgetary allocations for each individual program within the national IRA as the weighted average of the share of U.S. population and share of U.S. GDP for each state as of 2019. Thus for Michigan, its population equaled 3.0 percent of U.S. population and its GDP equaled 2.5 percent of U.S. GDP. We therefore allocated 2.75 percent of total IRA spending to Michigan in each individual IRA program category.

All figures have been estimated on the basis of calculations generated within the 2022 dollar year for the IMPLAN U.S. input/output tables. The IMPLAN U.S. input/output model features 546 industries within the U.S. economy. The data in the model are the state-level figures specific for Michigan from 2019.

In presenting results for expenditure levels and job creation for each of the program categories within the IRA—such as electricity, transportation, buildings and manufacturing—the total figures we report for these broad categories do not always sum up exactly to the figures for each of the individual programs within a category. Such small discrepancies are due to rounding.

Time Dimension in Measuring Job Creation

Any type of spending activity creates employment over a given amount of time. To understand the impact on jobs of a given spending activity, one must therefore incorporate a time dimension into the measurement of employment creation. For example, a project that creates 100 jobs that last for one year only needs to be distinguished from another project that creates 100 jobs that continue for 10 years each. It is important to keep this time dimension in mind in any assessment of the impact on job creation of any investment activity.

There are two straightforward ways in which one can express such distinctions. One is through measuring “job-years.” This measures cumulative job creation over the total number of years that jobs have been created. Thus, an activity that generates 100 jobs for 1 year would create 100 job-years. By contrast, the activity that produces 100 jobs for 10 years would generate 1,000 job-years. The other way to report the same figures would be in terms of jobs-per-year. Through this measure, we show the year-to-year breakdown of the overall level of job creation. Thus, with the 10-year project we are using in our example, we could express its effects as creating 100 jobs per year for 10 years.

In the following tables, we report employment creation both in terms of jobs-per-year—i.e. average annual job creation—as well as cumulative job-years. For the purposes of the present analysis, we assume, for simplicity, that all programs in the IRA will operate for 10 years. In fact, most programs in the bill are scheduled to operate for 10 years. But a minority of programs in the bill are scheduled to operate for less than 10 years. Note that our assumption of a 10-year duration for all programs does not affect the figures we report for total budgets or total job-years.

Details on Employment Estimates

For in-depth discussions of our methodological approach to estimating job creation through investments in clean energy and infrastructure, see:

Pollin et al. (2014) *Green Growth*, <https://www.americanprogress.org/issues/green/reports/2014/09/18/96404/green-growth/>;

Pollin et al. (2015) *Global Green Growth*, https://www.unido.org/sites/default/files/2015-05/GLOBAL_GREEN_GROWTH_REPORT_vol1_final_0.pdf.

Leveraging Public Funds to Expand Overall Public and Private Spending

Private spending incentive programs. For all tax credit and related programs in which public spending is designed to incentivize further private spending, we assume that the overall level of public spending will be matched equally by the same level of private spending—i.e. \$2 in total spending for every dollar of public funding. For example, we assume that the proposed \$7,500 tax credit per electric vehicle would incentivize another \$7,500 in private spending for electric vehicle purchases, for a total of \$15,000 in overall spending. The literature on leveraging public sector funds for incentivizing private spending considers a large number of variables and presents a range of estimates as to

the likely private spending levels that result from such leveraging programs. We deliberately assume here a relatively low leveraging rate for the relevant IRA programs.¹

Loan guarantee programs. The Department of Energy’s loan guarantee programs stipulate the loan authority associated with each level of appropriation. This includes a \$250 billion loan authority associated with a \$5 billion appropriation for the larger DOE program and a \$40 billion authority based on a \$3.6 billion appropriation. For the Tribal Loan Guarantee program, we assume the authority is \$3.8 billion based on an appropriation of \$75 million. The program thus assumes an approximate 50-to-1 leveraging ratio.²

1 https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/438763/bis-15-340-relationship-between-public-and-private-investment-in-R-D.pdf; <https://www.cgdev.org/sites/default/files/assessing-leverage-climate-investment-funds.pdf>

2 Discussion of the larger DOE program is at <https://prospect.org/environment/inflation-reduction-bill-uses-public-finance-to-stoke-energy-investment/>. We note that this 50-to-1 leveraging ratio for the DOE loan guarantees is close to the 47-to-1 ratio resulting from the DOE’s 1705 loan guarantee program within the 2009 American Recovery and Reinvestment Act. See Pollin et al. (2014), pp. 260 – 263 for discussion on the this earlier loan guarantee program.

TOTAL JOB CREATION ESTIMATES FOR MICHIGAN
Summary Figures

	Average Annual Budget and Job Creation Figures Over 10 Years			Total Budget and Job-Years Figures Over 10 Years	
	Public Spending	Total Spending (= <i>public</i> + <i>private spending</i>)	Annual Job Creation	Total Spending	Total Job Creation, Job-Years
Electricity Programs	\$588 million	\$1.8 billion	9,736	\$18.2 billion	97,362
Transportation Programs	\$91 million	\$154 million	1,223	\$1.5 billion	12,227
Building Programs	\$131 million	\$258 million	2,359	\$2.6 billion	23,589
Manufacturing Programs	\$184 million	\$352 million	2,196	\$3.5 billion	21,962

TOTAL JOB CREATION ESTIMATES FOR MICHIGAN
Summary Figures

	Average Annual Budget and Job Creation Figures Over 10 Years			Total Budget and Job-Years Figures Over 10 Years	
	Public Spending	Total Spending (= <i>public</i> + <i>private spending</i>)	Annual Job Creation	Total Spending	Total Job Creation, Job-Years
Electricity Programs	\$588 million	\$1.8 billion	9,736	\$18.2 billion	97,362
Transportation Programs	\$91 million	\$154 million	1,223	\$1.5 billion	12,227
Building Programs	\$131 million	\$258 million	2,359	\$2.6 billion	23,589
Manufacturing Programs	\$184 million	\$352 million	2,196	\$3.5 billion	21,962
Environmental Justice and Community Resilience Programs	\$30 million	\$30 million	234	\$304 million	2,336
Lands Programs	\$30 million	\$30 million	343	\$300 million	3,433
Agriculture Programs	\$60 million	\$60 million	620	\$595 million	6,199
TOTALS	\$1.1 billion	\$2.7 billion	16,711	\$27.1 billion	167,108

ACKNOWLEDGMENTS

This project was commissioned by the BlueGreen Alliance. We greatly appreciate their financial support as well as the fact that they respected our terms of engagement. Those terms included full autonomy in developing our methodology and generating our results. We especially appreciate the contributions to this work of Ben Beachy, Vice President of Manufacturing and Industrial Policy at the BlueGreen Alliance. Caitlin Kline was extremely helpful, yet again, in enabling us to finish this project on a tight deadline. Kim Weinstein produced a readable document at record speed.

POLITICAL ECONOMY RESEARCH INSTITUTE

The Political Economy Research Institute (PERI) promotes human and ecological well-being through our original research. Our approach is to translate what we learn into workable policy proposals that are capable of improving life on our planet today and in the future. In the words of the late Professor Robert Heilbroner, we at PERI “strive to make a workable science out of morality.”

Established in 1998, PERI is an independent unit of the University of Massachusetts, Amherst, with close ties to the Department of Economics. PERI staff frequently work collaboratively with faculty members and graduate students from the University of Massachusetts, and other economists from around the world. Since its founding, PERI has become a leading source of research and policy initiatives on issues of globalization, unemployment, financial market instability, central bank policy, living wages and decent work, and the economics of peace, development, and environmental sustainability.
